

What do you need to have Dynavox MT4, V, VMax, Express work wirelessly with your computer and therefore with the SMARTBoard ?

Dynavox Mayer-Johnson sells the AccessIt. Part number 500015 Canadian price is \$402.00. Same shipping charges apply as in US, \$25.00.

If you are interested in purchasing this you could contact the Dynavox Representative in your area for more information and set-up. The company is working on a Bluetooth version and I will update this when a functional alternative becomes available.

***Please note that when you have a symbol based program open like Boardmaker then when the individual presses their message window pictures as well as words will appear. In Notebook or Word, only the words will appear where you have your cursor placed.

What do you need to have PRC Devices work with your computer and therefore with the SMARTBoard?

To my knowledge all PRC devices come Bluetooth enabled. If you purchased an earlier model you may have to purchase the Bluetooth separately but it is an easy install into the back of the unit. You will also need a dongle for your computer if you do not have Bluetooth capabilities.

What do you need to have switches work with your computer and therefore with the SMARTBoard?

Switches can't be plugged in directly to the computer. You will need a switch interface such as a Don Johnston Switch Interface Pro V6 (www.bridges-canada.com). A good wireless switch option is the Jelly Beamer from Ablenet for between \$150-200 US
